Education

Indus University

B.Tech, Computer Engineering (CGPA: 9.81/10)

Ahmedabad, Gujarat

Expected Graduation: 2027

Technical Skills

- **Languages:** Python, SQL, JavaScript, PHP
- **Machine Learning:** Classification, Regression, Clustering, NLP, Feature Engineering, Hyperparameter Tuning, Model Evaluation, Statistical Analysis
- **ML & Data Libraries:** Scikit-learn, PyTorch, XGBoost, LightGBM, Pandas, NumPy, Scrapy, BeautifulSoup, Matplotlib, Seaborn
- **MLOps:** MLflow, DVC, Optuna, Docker, Git/GitHub, GitHub Actions (CI/CD)
- **Backend & Web:** FastAPI, Django, REST APIs, React, Streamlit
- **AI Platforms & Automation:** Hugging Face, Gemini, Claude, OpenRouter, LiveKit, n8n
- **Databases & BI:** PostgreSQL, MySQL, PL/SQL, MongoDB, Power BI, Tableau

Experience

HN Techno

Python, Django & Data Science Trainee

Ahmedabad, Gujarat

- **Backend Development:** Built web applications with **Python** and **Django**, including database integration and **RESTful API** development.
- **Data Science:** Performed data analysis and built **ML workflows** using **Pandas**, **NumPy**, and **Scikit-learn** on real-world datasets.

Projects

Customer Shopping Behavior Analytics

Python, PostgreSQL, Power BI

GitHub

- End-to-end analysis of **3,900+** shopping transactions to uncover customer segments, discount sensitivity, and repeat-purchase drivers for a retail business.
- Cleaned and engineered features in **Python**, ran business analysis in **SQL** on **PostgreSQL**, and shipped an interactive **Power BI** dashboard with revenue and subscription insights.

YouTube Comment Sentiment Analysis

Python, LightGBM, Optuna, MLflow, DVC, FastAPI, Chrome Extension

GitHub

- Built an end-to-end **MLOps** pipeline and **Chrome extension** classifying YouTube comment sentiment in real time, benchmarking **6 models** across **5 imbalance techniques** and tuning the final **LightGBM** with **50+ Optuna** trials.
- Tracked experiments with **MLflow** and **DVC**, automated retraining via **CI/CD**, and deployed a live **FastAPI** backend serving the extension.

Resume-Job Matcher

Python, FastAPI, FastEmbed, ChromaDB, Gemini, Next.js, Scrapy, BeautifulSoup

GitHub

- Scraped **680** real Indeed job postings using **Scrapy** and **BeautifulSoup**, and built a matcher that ranks them against an uploaded PDF resume using **TF-IDF**, **semantic embeddings (FastEmbed + ChromaDB)**, and a **hybrid score**.
- Added matched/missing **skill gap analysis** and optional **Gemini**-powered “Why this match?” explanations for each result.
- Built a **FastAPI** backend (deployed on **Render**) and a **Next.js** frontend (deployed on **Vercel**), with an evaluation module to compare the three ranking methods.

Achievements

- Completed a **Machine Learning Program with Teachnook** — hands-on experience in data preprocessing, model development, and end-to-end ML workflows.
- Completed a **Data Science & ML Program by MyJob Grow**, in collaboration with **IIT Bombay Techfest**, focused on EDA, predictive modeling, and data visualization.
- Participated in **Indus Hackathon 2025** and **Ingenium 2026 Hackathon** (Ahmedabad University), applying full-stack and problem-solving skills in competitive settings.
